

# Bristle Roller

## Swedtool® Bristle Rollers Effective for uneven surfaces

Roller tool with a roller comprising black nylon bristles mounted on a 6 mm electroplated steel bend. The Swedtool bristle roller has black nylon bristles embedded on a spiral wound metal core, specially designed to effectively puncture air bubbles in GRP laminates with uneven surfaces. Due to a simple snap on/snap off mechanism the roller is quickly and easily cleaned. No screws or metal washers are used.
