

Swedtool® Catalyst Dispenser

1 litre & ½ litre measuring equipment

The dispenser has been specially developed to simplify rapid measurement of small amounts of liquid, in particular hardeners in the plastics industry. It is simple to use.

The hole in the orange-coloured tube is set to the required level of liquid volume according to the scale on the measuring glass. The bottle is then carefully pressed together and the liquid automatically fills the measuring glass to the desired level. In the event too much liquid is pressed up into the measuring glass, the correct level is automatically set once the pressure has ceased.

0-75 ml molded scale

The lid on the measuring glass and the plug in the tube prevents splashing.

Measuring glass: TPX - transparent, can cope with most types of liquids

- Simple and safe to use
- Accurate measurement
- Handles most types of fluids
- Comes in two sizes

Dispensers		
Name	Art.no.	Shape
Catalyst Dispenser 1 litre	60-000101	Round
Catalyst Dispenser 1/2 litre	60-000102	Rectangular
